## Summary

5+ Years of experience in utilizing **Tableau** to create visually appealing and informative reports and dashboards. Strong ability to analyze and interpret complex data sets and effectively communicate insights to stakeholders. Proven track record of utilizing data-driven decision-making to drive business success. Strong technical skills and ability to work collaboratively with cross-functional teams.

## Technical Skills

| | |
|---|---|
| **Programming Languages** | Python |
| **Technologies and Frameworks** | Django, Flask |
| **Development Tools** | Tableau Desktop, Tableau Prep, Tableau Server |
| **Methodologies** | Agile |
| **DB Languages** | MySQL, Amazon Athena |
| **Version Control** | GitHub |

## Work Experience

**Data Analyst** | ***PayU, Bangalore*** **June 2024 – Current**

- Designed and maintained Tableau dashboards focused on business-critical metrics such as loan repayment trends, delinquency patterns, and NACH registration status.
- Developed a comprehensive Sales MIS dashboard consolidating daily performance data from various farming and DSA partners, enabling leadership to track achieved vs. target metrics across states and cities.
- Migrated authentication for Django-based internal tools from Google SAML to Microsoft SAML for secure Tableau dashboard embedding.
- Collaborated with cross-functional teams (Risk, Ops, and Finance) to define KPIs, clean datasets, and ensure end-to-end data accuracy and visualization.

**Projects:**

**Repayment Dashboard**

- Built a dynamic Tableau dashboard that tracks the entire repayment lifecycle — from active loans and EMI due amounts to delinquency categorization.
- Added multi-month visibility into NACH registration funnel: eligibility, registration, success, rejection, and activation rates.
- Enabled daily refresh and drill-down features for business and risk teams.

**Sales MIS Dashboard**

- Created a Tableau dashboard for daily MIS reporting, showing Credit Assessed, OPS Submission, Disbursals, and Value of Approvals across multiple business lines like PS Farming, LP Cash Loan, etc.
- Integrated Tableau filter and parameter options for Employment Type, Channel, State, City, and Partner to enable granular performance analysis.

**Authentication System Migration & Secure Tableau Embedding**

- Migrated Django-based authentication from Google SAML to Microsoft SAML to align with updated enterprise security standards and improve SSO integration.
- Ensured seamless Tableau dashboard embedding post-migration, maintaining secure user access and consistent session handling across services.
- Coordinated with InfoSec and Infrastructure teams to implement and test the new SAML configuration.
- Tech Used: Python, Django Framework

**Data Engineer** | ***CSM Technologies, Bhubaneswar*** **February 2021 – June 2024**

- Worked extensively with **Tableau Desktop**, including creating advanced chart types, blending data from multiple sources, and creating **calculated fields** for advanced analysis.
- Experience with **Tableau Server** and **Tableau Online**, including managing user access and permissions, managing data sources, and implementing security protocols to protect sensitive data.
- Experience in creating complex SQL queries for data extraction and analysis from data warehouse systems, along with optimizing query performance for faster reporting in Tableau.
- Strong understanding of data visualization best practices and design principles, and have experience creating visually appealing and informative dashboards and reports.

**Projects:**

**GIS Analysis of Paddy (Govt. of Odisha, FSCW Dept)**

- The primary objective of this project is to detect individuals in Odisha who receive government Minimum Support Price (MSP) benefits but are not actively engaged in farming. We have achieved this by analyzing data on farmers, land, and Geographic Information System (GIS).
- To facilitate this objective, I have developed five dashboards and six reports for each agricultural season, specifically for Rabi and Kharif.
- These dashboards are designed to present complex calculations using calculated fields and parameters. They also allow users to drill down into data up to four levels, all within the Tableau platform.
- We have implemented Pagination Tableau Reports using **Custom SQL Queries** and the parameter feature. In doing so, we utilized various SQL techniques such as **joins, partitions, window functions, aggregation functions, and subqueries** to create these reports. The reports themselves offer tabular views with thousands of rows and include pagination functionality seamlessly integrated into Tableau.
- Additionally, we have harnessed plot-level GIS analysis to achieve substantial cost savings and to identify potential beneficiaries who may not be actively engaged in farming.
- This project, also known as **"Crop One Analytics"**, was awarded the IMC Digital Technology Awards 2021.
- Technology Used- Tableau, Python, Tableau Prep

**CM Dashboard (Govt. of Odisha)**

- The main objective of the project is to analyze various schemes implemented by the Government of Odisha. The resulting dashboards will be made available for public viewing.
- I created eight dashboards using Tableau, which include various types of calculations and parameters, as well as sets, grouping, sheet swapping, and drill-down capabilities on tables up to three levels and maps.
- As this is a public dashboard. You can check this out by following this link(https://statedashboard.odisha.gov.in/)
- Technology Used- Tableau, MySQL

**UT Dashboard (Govt. of Jammu)**

- The Government of Jammu is running various schemes throughout the state. Their objective is to analyze the performance of these schemes for each district and make decisions accordingly.
- I worked closely with the client for a month on their onsite location in order to gain a deeper understanding of their requirements.
- I collected data from them, created ETL flows, and we developed 32 dashboards with the capability for drill-down on maps and tables using Tableau.
- Utilized Python to fetch data from an API, and then seamlessly integrated this Python code into Tableau Prep using Tabpy.
- Tech Used: Tableau, Python, Tableau Prep

## EDUCATION

**Gandhi Institute for Technology** Bhubaneswar, India
*Master of Computer Application (MCA)* *2019 – 2021*

**Christ College** Cuttack, India
*Bachelor in Computer Science* *2016 - 2019*
